

BIOPHYSICS OF COMPUTATION: INFORMATION PROCESSING IN SINGLE NEURONS

CHRISTOF KOCH

September , 199,

Contents

Introduction	1
1 The Membrane Equation	7
1.1 The Structure of the Passive Neuronal Membrane	7
1.1.1 The Resting Potential	8
1.1.2 The Membrane Capacity	8
1.1.3 The Membrane Resistance	10
1.2 A Simple RC Circuit	10
1.3 RC Circuits as Linear Systems	13
1.3.1 Filtering by RC Circuits	14
1.4 Synaptic Input	16
1.5 Synaptic Input is Nonlinear	20
1.5.1 Synaptic Input, Saturation and the Membrane Time Constant	20
1.5.2 Synaptic Interactions Among Excitation and Shunting Inhibition . . .	22
1.5.3 Gain Normalization in Visual Cortex and Synaptic Input	23
1.6 Recapitulation	24
2 Linear Cable Theory	27
2.1 Basic Assumptions Underlying One-Dimensional Cable Theory	28
2.1.1 The Linear Cable Equation	32
2.2 Steady-State Solution	34
2.2.1 Infinite Cable	34
2.2.2 Finite Cable	36
2.3 Time-Dependent Solutions	39
2.3.1 Infinite Cable	39
2.3.2 Finite Cable	43
2.4 Neuronal Delays and Propagation Velocity	45
2.5 Recapitulation	48
3 Passive Dendritic Trees	49
3.1 Branched Cables	51
3.1.1 What Happens At Branch Points?	51
3.2 The Equivalent Cylinder	54

3.3	Solving the Linear Cable Equation for Branched Structures	57
3.3.1	Exact Methods	58
3.3.2	Compartmental Modeling	59
3.4	Transfer Resistances	60
3.4.1	The General Definition	61
3.4.2	An Example	61
3.4.3	Properties of $\tilde{K}_{ij}$	62
3.4.4	Transfer Resistances in a Pyramidal Cell	64
3.5	Measures of Synaptic Efficiency	66
3.5.1	Electrotonic Distance	66
3.5.2	Voltage Attenuation	67
3.5.3	Charge Attenuation	69
3.5.4	Graphical Morphoelectrotonic Transforms	71
3.6	Signal Delays in Dendritic Trees	74
3.6.1	The Experimental Determination of τ_m	74
3.6.2	The Local and Propagation Delay in Dendritic Trees	76
3.6.3	Dependence of Fast Synaptic Inputs on Cable Parameters	79
3.7	Recapitulation	80
4	Synaptic Input	83
4.1	Neuronal and Synaptic Packing Densities	84
4.2	Synaptic Transmission is Stochastic	85
4.2.1	The Probability of Synaptic Release p	87
4.2.2	What is the Synaptic Weight?	88
4.3	Neurotransmitters	89
4.4	Synaptic Receptors	91
4.5	Synaptic Input as Conductance Change	93
4.5.1	Synaptic Reversal Potential in Series with an Increase in Conductance	94
4.5.2	Conductance Decreasing Synapses	96
4.6	Excitatory, NMDA and non-NMDA Synaptic Input	96
4.7	Inhibitory, GABAergic Synaptic Input	102
4.8	The Post-Synaptic Potential	103
4.8.1	Stationary Synaptic Input	103
4.8.2	Transient Synaptic Input	106
4.8.3	Infinitely Fast Synaptic Input	107
4.9	The Visibility of Synaptic Inputs	108
4.9.1	Input Impedance in the Presence of Synaptic Input	109
4.10	Electrical Gap Junctions	109
4.11	Recapitulation	112

5	Synaptic Interactions In a Passive Dendritic Tree	115
5.1	Nonlinear Interaction Among Excitation and Inhibition	116
5.1.1	Absolute versus Relative Suppression	116
5.1.2	General Analysis of Synaptic Interaction in a Passive Tree	119
5.1.3	Location of the Inhibitory Synapse	121
5.1.4	Shunting Inhibition Implements a “Dirty” Multiplication	122
5.1.5	Hyperpolarizing Inhibition Acts Like a Linear Subtraction	126
5.1.6	A Functional Interpretation of the Synaptic Architecture and Dendritic Morphology: AND-NOT Gates	127
5.1.7	Retinal Directional Selectivity and Synaptic Logic	128
5.2	Nonlinear Interaction Among Excitatory Synapses	130
5.2.1	Sensitivity of Synaptic Input to Spatial Clustering	130
5.2.2	Cluster Sensitivity for Pattern Discrimination	134
5.3	Synaptic Microcircuits	135
5.4	Recapitulation	136
6	The Hodgkin and Huxley Model of Action Potential Generation	139
6.1	The Basic Assumptions	141
6.2	Activation and Inactivation States	142
6.2.1	The Potassium Current I_K	142
6.2.2	The Sodium Current I_{Na}	145
6.2.3	The Complete Model	146
6.3	Action Potential Generation	147
6.3.1	The Voltage Threshold for Spike Initiation	148
6.3.2	Refractory Period	150
6.4	Relating Firing Frequency to Sustained Current Input	152
6.5	Action Potential Propagation Along the Axon	155
6.5.1	The Empirical Determination of the Propagation Velocity	155
6.5.2	Nonlinear Wave Propagation	159
6.6	Action Potential Propagation in Myelinated Fibers	160
6.7	Branching Axons	162
6.8	Recapitulation	165
7	Phase Space Analysis of Neuronal Excitability	167
7.1	The FitzHugh-Nagumo Model	168
7.1.1	The Nullclines	170
7.1.2	Stability of the Equilibrium Points	171
7.1.3	Instantaneous Current Pulses: Action Potentials	174
7.1.4	Sustained Current Injection: A Limit Cycle Appears	175
7.1.5	Onset of Non-Zero Frequency Oscillations: The Hopf Bifurcation	177
7.2	The Morris-Lecar Model	179
7.2.1	Abrupt Onset of Oscillations	180

7.2.2	Oscillations with Arbitrary Small Frequencies	181
7.3	More Elaborate Phase Space Models	184
7.4	Recapitulation	184
8	Ionic Channels	187
8.1	Properties of Ionic Channels	189
8.1.1	The Biophysics of Channels	189
8.1.2	The Molecular Structure of Channels	192
8.2	Kinetic Model of the Sodium Channel	195
8.3	From Stochastic Channels to Deterministic Currents	197
8.3.1	Probabilistic Interpretation	198
8.3.2	Spontaneous Action Potentials	201
8.4	Recapitulation	204
9	Beyond Hodgkin and Huxley: Calcium, and Calcium-Dependent Potassium Currents	205
9.1	Calcium Currents	206
9.1.1	Goldman-Hodgkin-Katz Current Equation	207
9.1.2	The High-Threshold Calcium Current	209
9.1.3	The Low-Threshold, Transient Calcium Current	209
9.1.4	The Low-Threshold Spike in Thalamic Neurons	210
9.1.5	The N Type of Calcium Current	211
9.1.6	Calcium as a Measure of the Spiking Activity of the Neuron	211
9.2	Potassium Currents	213
9.2.1	Transient Potassium Currents and Delays	214
9.2.2	Calcium-Dependent Potassium Currents	216
9.3	Firing Frequency Adaptation	217
9.4	Other Currents	219
9.5	An Integrated View	220
9.6	Recapitulation	222
10	Linearizing Voltage-Dependent Currents	225
10.1	Linearization of the Potassium Current	226
10.2	Linearization of the Sodium Current	229
10.3	The Linearized Membrane Impedance of a Patch of Squid Axon	231
10.4	Functional Implications of Quasi-Active Membranes	233
10.4.1	Spatio-Temporal Filtering	234
10.4.2	Temporal Differentiation	235
10.4.3	Electrical Tuning in Hair Cells	235
10.5	Recapitulation	237

11 Diffusion, Buffering and Binding	239
11.1 The Diffusion Equation	240
11.1.1 Random Walk Model of Diffusion	240
11.1.2 Diffusion in Two or Three Dimensions	242
11.1.3 The Diffusion Coefficient	243
11.2 Solutions to the Diffusion Equation	244
11.2.1 Steady-State Solution for an Infinite Cable	246
11.2.2 Time-Dependent Solution for an Infinite Cable	246
11.2.3 The Square-Root Relationship of Diffusion	247
11.3 Electrodiffusion and the Nernst-Planck Equation	249
11.3.1 Relationship between the Electrodiffusion and Cable Equations	251
11.3.2 An Approximation to the Electrodiffusion Equation	252
11.4 Buffering of Calcium	252
11.4.1 Second-Order Buffering	254
11.4.2 Higher-Order Buffering	255
11.5 Reaction-Diffusion Equations	256
11.5.1 The Experimental Visualization of Calcium Transients in Diffusion-Buffered Systems	257
11.6 Ionic Pumps	259
11.7 Analogy between the Cable and the Diffusion-Reaction Equations	260
11.7.1 Linearization	261
11.7.2 Chemical Dynamics and Space and Time Constants of the Diffusion Equation	262
11.8 Calcium Nonlinearities	267
11.9 Recapitulation	267
12 Dendritic Spines	271
12.1 The Natural History of Spines	272
12.1.1 The Distribution of Spines	272
12.1.2 The Microanatomy of Spines	273
12.1.3 Induced Changes in Spine Morphology	275
12.2 Spines only Connect	276
12.3 Passive Electrical Properties of Single Spines	277
12.3.1 Current Injection into a Spine	277
12.3.2 Excitatory Synaptic Input to a Spine	278
12.3.3 Joint Excitatory and Inhibitory Input to a Spine	281
12.3.4 The Geniculate Spine-Triad	283
12.4 Active Electrical Properties of Spines	285
12.5 Effect of Spines on Cables	288
12.6 Diffusion in Dendritic Spines	290
12.6.1 Solutions of the Reaction-Diffusion Equation for Spines	290
12.6.2 Imaging Calcium Dynamics in Single, Dendritic Spines	293

12.7	Recapitulation	295
13	Synaptic Plasticity	297
13.1	Quantal Release	300
13.2	Short-term Synaptic Enhancement	302
13.2.1	Facilitation is an Increase in Release Probability	302
13.2.2	Augmentation and Post-Tetanic Potentiation	303
13.2.3	Release and Presynaptic Calcium	304
13.3	Long-Term Synaptic Enhancement	305
13.3.1	Long-Term Potentiation	306
13.3.2	Short-Term Potentiation	309
13.4	Synaptic Depression	309
13.5	Synaptic Algorithms	310
13.5.1	Hebbian Learning	310
13.5.2	Temporally-Asymmetric Hebbian Learning Rules	312
13.5.3	The Sliding Threshold Rule	313
13.5.4	Short-Term Plasticity	313
13.5.5	Unreliable Synapses: Bug or Feature?	315
13.6	Non-Synaptic Plasticity	316
13.7	Recapitulation	317
14	Simplified Models of Individual Neurons	319
14.1	Rate Codes, Temporal Coding and All of That	320
14.2	Integrate-and-Fire Models	324
14.2.1	The Perfect or Non-Leaky Integrate-and-Fire Unit	325
14.2.2	The Forgetful or Leaky Integrate-and-Fire Unit	326
14.2.3	Other Variants	328
14.2.4	The Response Time of Integrate-and-Fire Units	329
14.3	Firing Rate Models	331
14.3.1	Comparing the Dynamics of a Spiking Cell with a Firing Rate Cell	332
14.4	Neural Networks	334
14.4.1	Linear Synaptic Interactions are Common to Almost All Neural Networks	334
14.4.2	Multiplicative Interactions and Neural Networks	335
14.5	Recapitulation	337
15	Stochastic Models of Single Cells	339
15.1	Random Processes and Neural Activity	340
15.1.1	The Poisson Process	341
15.1.2	Power Spectrum Analysis of Point Processes	342
15.2	Stochastic Activity in Integrate-and-Fire Models	344
15.2.1	The Interspike Interval Histogram	345
15.2.2	The Coefficient of Variation	346
15.2.3	The Spike Count and Fano Factor	348

15.2.4	The Random Walk Model of Stochastic Activity	350
15.2.5	Random Walk in the Presence of a Leak	352
15.3	What Do Cortical Cells Do?	353
15.3.1	Cortical Cells Fire Randomly	354
15.3.2	Pyramidal Cells: Integrator or Coincidence Detector	356
15.3.3	The Temporal Precision of Cortical Cells	358
15.4	Recapitulation	359
16	Bursting Cells	361
16.1	Intrinsically Bursting Cells	361
16.2	Mechanisms of Bursting	363
16.3	What Is the Significance of Bursting?	364
16.4	Recapitulation	365
17	Input Resistance, Time Constants and Spike Initiation	367
17.1	Measuring Input Resistances	367
17.1.1	Membrane Chord Conductance	369
17.1.2	Membrane Slope Conductance	369
17.2	Time Constants for Active Systems	371
17.3	Action Potential Generation and the Question of Threshold	372
17.3.1	The Current-Voltage Relationship	372
17.3.2	Stability of the Membrane	373
17.3.3	Voltage Threshold	374
17.3.4	Current Threshold	376
17.3.5	Charge Threshold	377
17.3.6	Voltage versus Current Threshold	379
17.4	The Action Potential	379
17.5	Repetitive Spiking	380
17.5.1	The Discharge Curve	380
17.5.2	The Membrane Potential During Spiking Activity	381
